

GET ASSURANCE GOING IN

It's time to look at acidizing differently. Work with Petroplex early in the field development process and plan for greater flows, greater predictability, greater success.

PETROPLEX ACIDIZING

“ Petroplex transformed our philosophy on chemical treatment. Their proactive technical approach, data-driven decision-making, and strong customer service-oriented staff worked together to enhance our entire program. ”

– Production Engineer
Delaware Basin

DON'T REACT. PROACT.

Yes, acidizing can be a quick-fix method to free up wellbore restrictions. But when you work with Petroplex, it becomes much more. We collaborate with you to create a strategy to optimize uplift across your field without the typical delays and costs by designing custom rigless treatments. We bring deep expertise, advanced chemistry, and robust data to the planning table, which allows us to target wells for acidizing that have the greatest potential for production gains.

THE ASSETS TO DELIVER.

Petroplex is the leading and largest provider of acidizing services in the Permian. We have the crews, the equipment, and the drive to do it fast, do it safely, and do it right. Our dedicated fleet of 26 acidizing pumps totaling over 43,000 hydraulic horsepower ensures we can perform any job, from .5-1 BPM pump-and-flush treatments to full-on 60 BPM treatments. When you entrust your wellsite to us, your uplift goals become ours. We will bring our full expertise to bear to help you maximize production and minimize costs.

THE PETROSOL DIFFERENCE.

Petroplex gives you a multitude of advantages, all the way down to the molecular level. Acid treatments are engineered for maximum effect using Petrosol, our proprietary chemical technology. Petrosol takes on the challenges of treating oil wet formations by breaking emulsions and tight oil/water interfaces downhole to allow acid to penetrate further into the formation while leaving it water wet. Our advanced chemistry proves itself in the Permian every single day by demonstrating an 81% increase in BOPD compared to traditional acid systems.

PRODUCTION GAINS, PREDICTED BY DATA.

Partner with Petroplex and you are gaining a strategic solution for achieving optimal production. What makes us so sure? Data. Before we acidize, we analyze. We combine decades of experience working in Permian formations with extensive engineering expertise to run the data and predict expected uplift increases. Data drives the design of every job, from acid formula to application approach. This helps you optimize budgets, schedules, and ROI.
